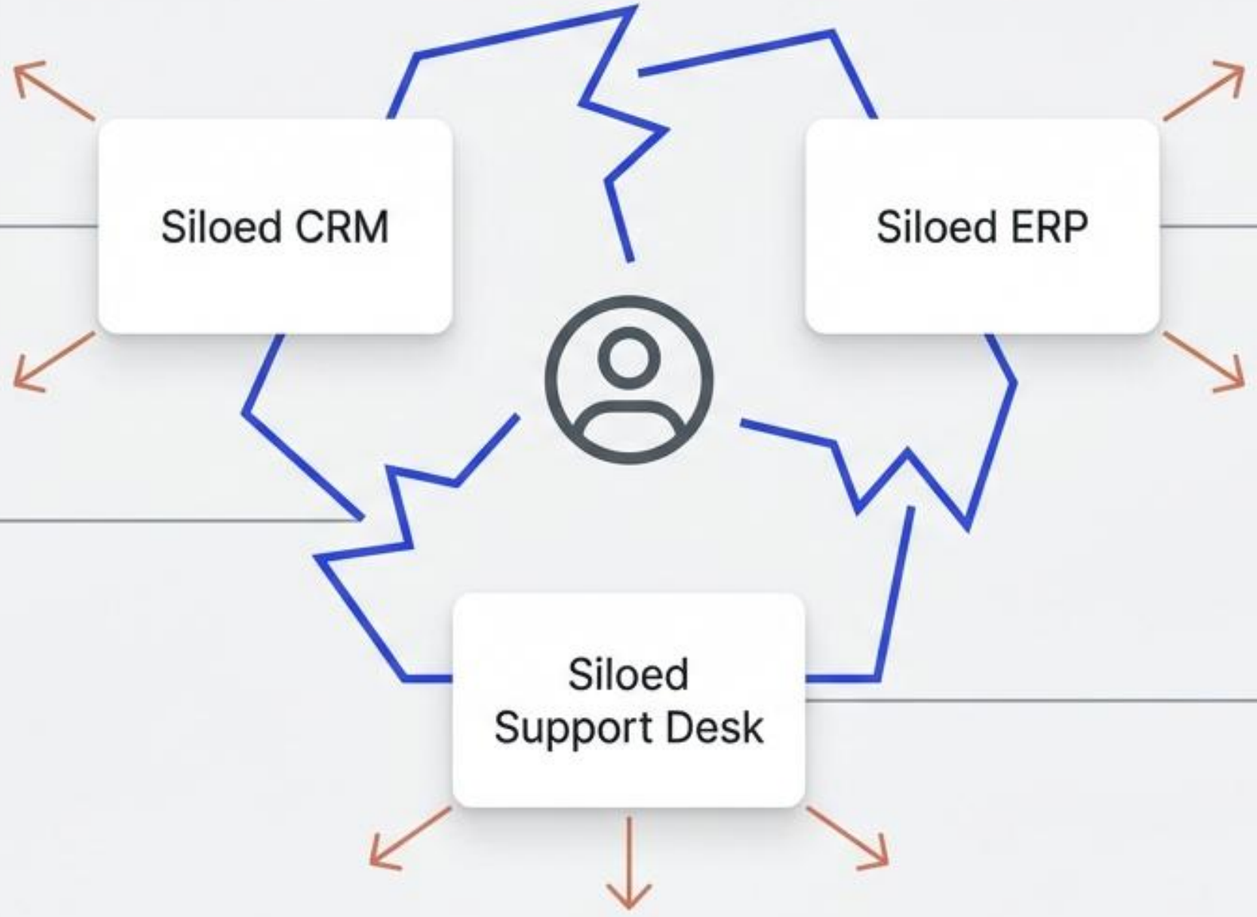
The AI-Powered Commercial Operating System

Unifying Marketing, Sales, Operations, and Customer Service into a single intelligence layer.

The Cost of Fragmented Systems

Marketing: Loses visibility once a lead is handed off.

Sales: Reps are blind to financial history and supply chain status.



Leadership: Forced to rely on manual, delayed reports from reps.

Technology: AI is merely bolted on as an afterthought, not a foundational layer.

One Customer. One Timeline. One System.

The Paradigm Shift

A Lead is not separate from a Customer; it is the exact same entity evolving over time.

The Unified Client Timeline

Every campaign touch, physical visit, Zoom meeting, Sales Order, Invoice, and support ticket lives chronologically on this single entity timeline. Context is never lost.

AI That Executes, Not Just Analyzes

Top Layer: Persona UI

The Intelligent Co-Pilot acts as an ambient decision engine, pushing contextual micro-actions directly to the user's screen (e.g., "Which deals are at risk?").

Middle Layer: Ambient Capabilities

Predicting revenue, drafting emails, and flagging anomalies autonomously behind the scenes.

Base Layer: Model Gateway

LLM routing via OpenRouter, utilizing Gemini, Claude, and Grok. Includes BYOK (Bring Your Own Key) capabilities for strict enterprise control.

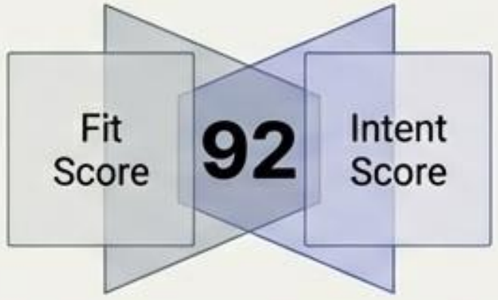
Maximum Output, Minimum Input: Marketing

Native Campaign Management

Manage email, events, and paid digital natively or via integrations with full-funnel attribution.

Lead →

AI Scoring Gate



→ Autonomous Handoff to Sales

Autonomous Handoff

When the MQL threshold is met, the lead routes to sales accompanied by an AI-generated qualification brief with suggested opening questions.

AI-Assisted Lead Scoring

Enrichment data automatically calculates Fit and Intent metrics without manual rules.

Marketing

clientera

Maximum Output, Minimum Input: Sales Execution

Field Sales

- “Invisible” GPS and QR-verified check-ins.
- Voice notes transcribed in real-time by Groq Whisper.
- Automatically extracts and schedules follow-up tasks.

Desk Sales

- One-Click Meeting Starts.
- AI-drafted email replies infused with complete, cross-departmental client context.
- Zero administrative data entry required.

Maximum Output, Minimum Input: Operations & Fulfillment

Smart Drafts

The AI automatically pre-fills Sales Order Request (SOR) line items and pricing based on the client's last 10 historical orders.

AI Anomaly Detection

Automatically flags orders deviating >40% from the 6-month historical average to protect the supply chain prior to manager approval.

Distributor Portal

Scoped external access where partners can place orders and use AI vision models to automatically classify claim defect categories categories from uploaded photos.

Ops

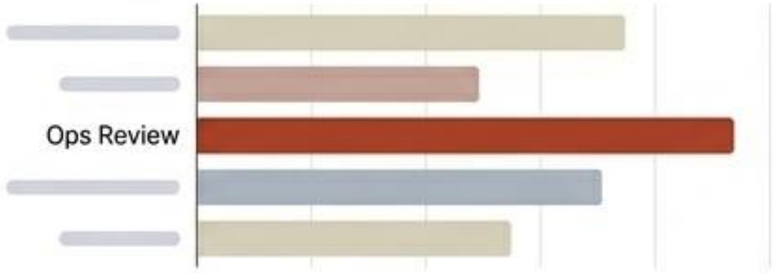
clientera

Maximum Output, Minimum Input: Executive Leadership

8:00 AM AI Digest

3 deals are at risk today.
2 invoices for Reliance are overdue.
Approval bottleneck detected in Ops Review.

Workflow Bottlenecks



The Morning AI Digest

Turns raw data into a natural-language briefing delivered daily at 8:00 AM, detailing at-risk deals and overdue invoices.

Workflow Bottleneck Analysis

The AI analyzes 90 days of operational workflows to pinpoint the exact approval steps or users causing delays.

Interactive KPIs

Dashboards featuring plain-text "Target Commentary" that predicts end-of-period outcomes based on real-time trajectories.

Leadership

clientera

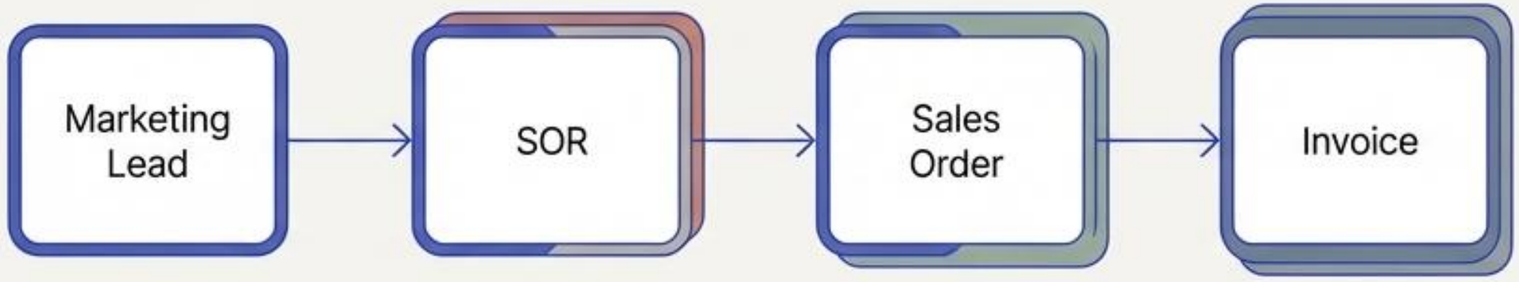
The Fulfillment Engine

The Entity Cascade:
No manual data re-entry. The exact same data entity evolves automatically through the pipeline from Lead to Invoice.

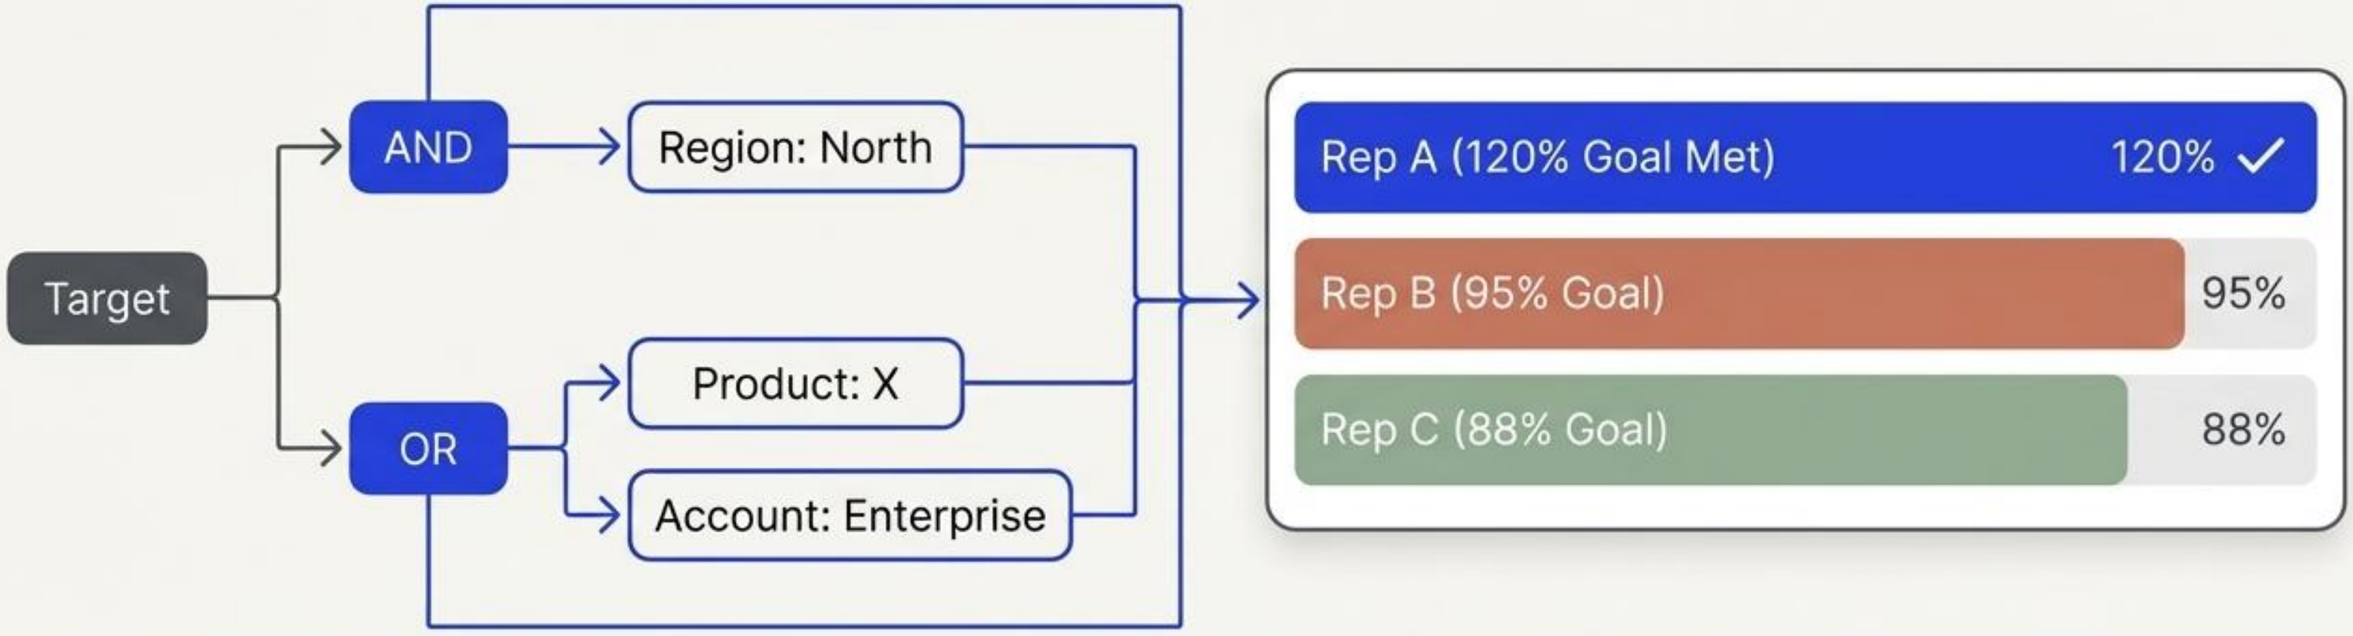
Three-Tier Assignment Model:
Work is queued to an eligible pool simultaneously; the first person to claim a task removes it from the rest, eliminating bottlenecks.

The Rework Mechanic:
Approvers can 'Send Back' a deal to a specific prior step for corrections, rather than resorting to a terminal rejection.

The Entity Cascade Chain
Anatomy of a Workflow



Intelligent Goal Setting



Dynamic Targets:

Replaces static dollar goals with complex coverage rules assigned by Region, Product, and Account using AND/OR logic.

Overlap Detection:

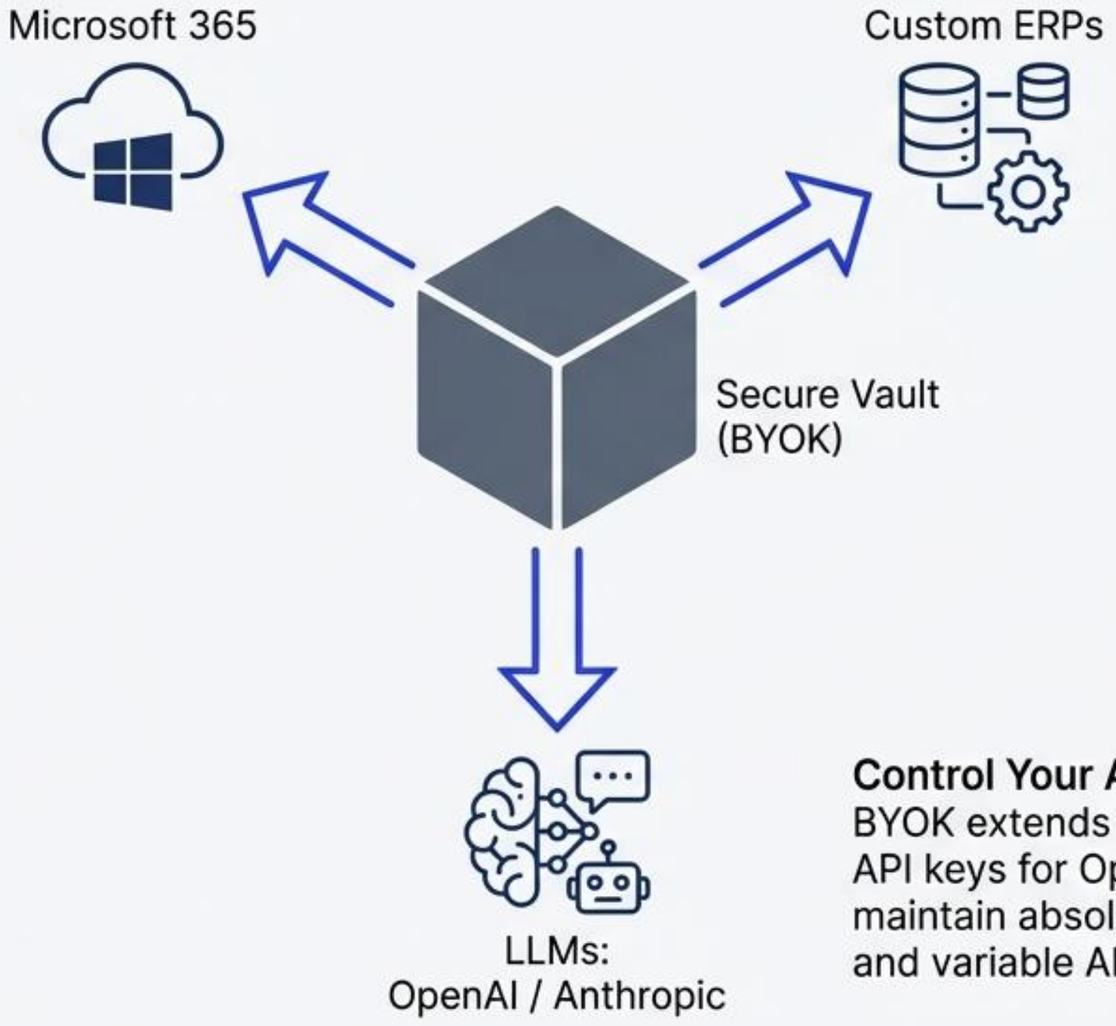
The system automatically detects and flags account overlap warnings between field reps to prevent conflict.

Real-Time KPIs:

Leaderboards are driven dynamically and instantly by confirmed invoices, ensuring single-source-of-truth accuracy.

Connect Everything. Control Your Data.

OpenAPI-First Architecture:
Built natively for two-way sync capabilities with external systems, custom ERPs, and internal tools.



Bring Your Own Key (BYOK):
Absolute data sovereignty. Enterprise customers can use their own KMS encryption keys keys for all data at rest.

Control Your AI:
BYOK extends to AI models. Plug in your own API keys for OpenAI, Anthropic, or Grok to maintain absolute control over data privacy and variable AI costs.

Built for Global Scale and Absolute Compliance

Global Standards: Fully compliant with **SOC 2 Type II, ISO 27001, GDPR**, and **India's DPDP 2023** from Day One.

The Immutable Audit Trail: Every single system action, field edit, and approval is permanently recorded in an append-only database.

Zero Tampering: Records cannot be edited, altered, or deleted by anyone—not even system super-admins.

Scalable for Any Team Size

Starter

- Micro-businesses (Up to 5 users)
- Standard workflows
- Core KPIs
- BYOK required for AI integrations

Growth

- Scaling teams (Up to 50 users)
- Unlocks custom workflow builders
- Two-way ERP integrations
- Platform-provided AI keys

Enterprise

- Global scale (Unlimited users)
- Single Sign-On (SSO)
- Cross-company benchmarking
- Predictive analytics & white-glove onboarding

The Diagnostic Matrix: Legacy CRM vs. ClientEra

	Legacy Systems	ClientEra
Data Model	Fragmented, bolted-on systems	One Unified 360° Timeline
AI Role	Bolted-on chatbots	Core foundational intelligence layer
Follow-ups	Manual rep reminders	Autonomous system execution
Forecasting	Historical, rear-view reporting	Predictive revenue modeling
User Experience	Data-entry heavy	Ambient AI-assisted, low-effort UI

Old systems record what happened. ClientEra decides what should happen next — and executes it.

clientera

Faster Execution. Higher Higher Efficiency.

The ROI:

- **Sales:** Less admin, higher productivity, better conversion rates.
- **Leadership:** Real-time visibility and predictive insights without interrogating reps.
- **Business:** A connected enterprise ecosystem driving superior revenue efficiency.

What's Next (Phase 2 Roadmap):

Semantic Search: pgvector-powered embeddings to find deep conceptual insights across unstructured notes.

Autonomous AI Voice: Transitioning from email drafts to autonomous voice follow-ups for deal execution.

Cross-Product Ecosystem: Seamlessly connecting sales and operations directly with Finance and HR.
